

## COPIER/LASER PAPER TIPS (GRAIN SHORT)

### LOADING MACHINE

- Fan material thoroughly before loading into machine. This helps to aerate and separate sheets that have been compacted during the packaging and shipping process.
- *Rite in the Rain* card stock is grain short. Be sure to run a test prior to your production run.

### CARD SEPARATION

- After printing, fold back and forth along the perforation lines for easy separation.

### INK JET

- Most ink jet printers use water base inks that will not adhere to *Rite in the Rain*. Simply make an ink jet master copy on standard paper, then create *Rite in the Rain* duplicates on a photocopier.

### FUSER SETTINGS

- *Rite in the Rain* card stock is constructed from 100 Sub Weight (.007 mill) 163 g/m<sup>2</sup>. Be sure to choose the appropriate settings on your copier to run a heavier stock.
- *Rite in the Rain* is not a plastic. There is no risk of melting in your machine.

### STORAGE

- Always keep stock wrapped in factory packaging until ready to use. This keeps your material at the quality specifications held during the manufacturing process.
- Store material flat and at room temperature.

### SHELF LIFE

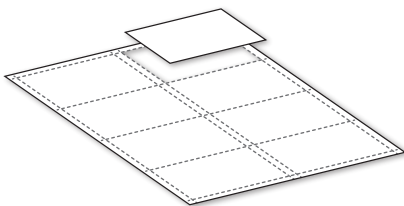

- To assure a long and unlimited shelf life, keep your product in the original packaging away from moisture and sunlight.

### CLEANING

- As with most papers, use a 99% pure Isopropyl Alcohol solution to clean your copier's feed and separation rollers to help prevent double feeding.
