For Extreme Conditions!

DURACOPY
WATERPROOF ®

COPIER / LASER PAPER TIPS

LOADING MACHINE

- Fan material thoroughly before loading into machine. This helps to aerate and separate sheets that have been compacted during the packaging and shipping process.
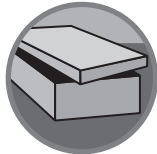

PRINTING

- DuraCopy can be printed on both sides in color as well as black and white.
- Special attention should be taken when duplexing this material . Synthetic materials retain heat longer than normal paper. Excess heat buildup could potentially cause wrinkling or blocking of the sheets. Some copiers have a media setting that can be changed to film or transparency, which may assist in preventing these problems. Another alternative is to print one side at a time, allowing the sheets to cool and then fan material between runs.
- Compatible with most conventional photocopier and laser printers.
- Not for use in ink jet printers. (Instead, use our waterproof WeatherJet)
- If you are having problems writing with a pen, some copiers utilize a fuser oil to help transfer the toner. This slick oil can interfere with the write-ability of a ballpoint pen. Try another printer or simply use a pencil.
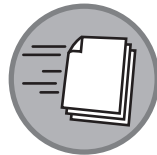

RECYCLABLE

- Recycle DuraCopy with general bulk plastics.

SHELF LIFE

- To insure a quality product always ready to print, keep it in the original packaging.
- Exposure to moisture & humidity prior to printing can compromise the print quality.

PRODUCT PERFORMANCE

- DuraCopy is an extremely durable synthetic waterproof sheet that resists tearing and provides a high quality printing surface.
- DuraCopy works well with any standard pencil or an all-weather pen.
- Proper ink adhesion is a function of correct fuser temperature.
- For best performance select a feed tray on your copier with the straightest paper path.
- DuraCopy can be perforated or hole punched like standard paper.

free FORMS ®

Download free copies of a variety of 8½″ x 11″ or loose leaf sized forms. Various grid sheets and common industry templates are available so you can easily produce your own all-weather forms. Click on the "downloads" link at *RiteintheRain.com* then click "free forms".
